

43pl is the international consortium of SMEs in the CRC for Spatial Information

Superair has been established for over 40 years and is based at Armidale airport in northern NSW. Superair provides precision flight and maintenance operations to the agricultural sector.

Services

Survey Operations

In 1997 Superair (Aust) became involved in overseas operations in association with Geophysical Technology Limited.

Superair has carried out operations for remediation of and airforce base in Hawaii on behalf of the US defence department.

Operations for Western Mining Corporation were carried out in 1997 in the Northern part of Canada, with excellent results.

Locally operations were carried out in Queensland for military purposes.

Superair, with the excellent low level capabilities of the Fletcher FU24 and Cresco aircraft and its many experienced pilots can supply an excellent aerial survey operation.

With extensive maintenance facilities for backup and new installations we can provide a comprehensive service.

Superair has also manufactured ground rigs for mine detection in association with GTL for a ground based section of their survey operations.

In 2010 Superair has joined with GPX Aerial Surveys from Perth to supply low level airborne survey operations throughout Australia.

Market Sectors

- Military
- Mining
- Farming

Product / Service Examples

Superair Australia has become the first Australian company to put into service a Pacific Aerospace "Cresco" aircraft for topdressing.

This included a first of type certification onto the Australian register.

The aircraft design is based on the proven Fletcher aircraft manufactured in New Zealand

Features

- Pratt & Whitney 750 hp turbine engine
- 2 tonne capacity
- Safer operation due to the power output of the engine
- Reduction in pilot fatigue due to air conditioning and improved aircraft performance
- Quieter operation due to turbine engine
- The aircraft is also fitted with moving map display, differential GPs. This gives track guidance to within 1 metre.

Spatial Information Disciplines

GIS and spatial analysis/visualisation, Land surveying, Engineering and mining surveying,
