

43pl is the international consortium of SMEs in the CRC for Spatial Information

Insight GIS is a Tasmanian IT company that specialises in Geographic Information System services for business and government. Providers of world-class GIS software, they also offer consultation, training, technical support and many other value-adding services.

Services

Insight GIS offers a range of specialist services to help you maximise your GIS investment.

GIS Consultancy - Benefit from customised GIS solutions that integrate seamlessly with your IT systems. Get personalised service and advice from consultants with comprehensive GIS skills and experience.

Training - Select from a range of training courses that provide you with the knowledge and skills to effectively use MapInfo software in the workplace.

Software Development - Gain customised GIS software solutions with effective data management that are easy to use and integrate with your existing IT systems.

Map Production - Get high quality maps produced in hardcopy or digital format that allow you to present spatial information for analysis in a clear and effective way, ideal for important meetings and presentations.

Data Processing - Get more out of your data with our wide range of quality data processing services, from geocoding and digitising to image processing and 3D visualisation.

Technical Support - Gain assistance from qualified and experienced support staff who are competent in all aspects of MapInfo.

Market Sectors

Insight GIS provide services to a number of different types of business from analytical capabilities for agriculture and media to data and logistics management for commercial, transport, assets and infrastructure.

- **Government** - Local and federal government especially in the areas of Planning & Services, Property, Emergency Services, Health and Environment. Our clients have used our GIS expertise services in a wide range of projects such as bus route planning, identifying crime hot spots, conservation of ecosystems, fire management and many more.
- **Utilities** - GIS and spatial location is an important instrument in the management of utilities from ports, water, sewer, electricity and gas. Insight GIS is able to assist in design, development, integration, analysis and assessment of GIS in all of these vital areas.

Product / Service Examples

In addition to producing our own GIS software products, we provide the full suite of MapInfo software.
